inter-plast Bodziachowski

Inter-Plast Andrzej Bodziachowski company was established in 1995 and is one of the biggest companies in Poland selling used CNC metal working machines. We own properties in the form of 1.5 ha of area partially built over with modern halls of 6000 m². **There are over 100 machines in stock.**

We would like to invite you to co-operate with us.
Andrzej Bodziachowski

We buy machines in large quantities for cash

CNC Horizontal Machining Center
DMG DMC 70 H DUOBLOCK
Swarf Conveyor
Year of production: 2007
CNC SIEMENS 840
X: 700 mm
Y: 800 mm
Z: 800 mm
B: 360 degrees
Pallet: 500 x 500 mm
Tool holder: HSK 63
Spindle rpm: 10 000 rpm
Tool magazine: 120 pcs

CNC Horizontal Machining Center **AB MARWIN AUTOMAX II**
2 pallet, Year of production: 2001 **CNC FANUC 150iM**
Working travel X/Y/Z: 3400/1350/760 mm, A/B:+/-45°
Pallet: 3100 x 1220 mm, Rapid feed: 25 000 mm/min

CNC Gantry Type Milling Machine **HARTFORD HB 3150**
Year of production: 1998 **CNC MITSUBISHI MELDAS**
Working travel X/Y/Z: 3000/1500/700 mm, Table: 3100 x 1500 mm, Tool magazine: 40 pcs, Range of spindle speeds: 40-3375 rpm, Max. workpiece weight on table: 6500 kg

CNC Vertical Machining Center **HARTFORD VMC 3060 SG**
indexer, Year of production: 2002 **CNC FANUC 18 M/C**
Working travel X/Y/Z: 3060/800/620 mm, Table: 3100 x 800 mm
Max. table load: 3000 kg, Tool magazine: 20 pcs

CNC Lathe **TORNOS BECHLER DECO 13 B/BI**
driven tools, sub-spindle, C axis, bar magazine
Year of production: 2000 **CNC FANUC PNC DECO**
Max. bar diameter: 13 mm, Turning length: 160 mm, Range of spindle/sub-spindle speeds: 12 000 rpm, Tools on rail: 14 pcs

Doors set to open at SteelFab 2016

On 17-20 January, SteelFab 2016 will open its doors at the Expo Centre in Sharjah, United Arab Emirates. Set to be the show's 12th edition, the region's steel fabrication and metalworking industry relies solely on SteelFab to acquire the latest machinery and improve productivity and efficiency. This has resulted in SteelFab registering impressive growth in visitor numbers and enquiries that translate into actual sales, therefore delivering an even greater opportunity for machinery dealers.

For example, the World Expo 2020 win and the reclassification of the UAE to emerging market status are sure to add dynamism to this year's exhibition. Furthermore, the world-familiar MTI Pavilion will be present at the show, hosting dealers such as Electromotion and GD Machinery, while Dugard will be located on the adjoining stand with its local partner, Aliyat. Also present will be Used Structural Steel Machinery, which will similarly be sharing a stand with its local partner. As always, MTI will be distributing additional printed copies of the latest issue (over and above the regular circulated quantity) to show visitors as part of its worldwide exhibition tour schedule.

Italians visit IKCO auto plants

An Italian delegation paid a visit to the production lines of Iran's largest car manufacturer, Iran Khodro (IKCO), last month. The 25-member delegation, which comprised Italian economic and industrial leaders, made a tour of IKCO's press, body, engine and assembly facilities. The visit was aimed at getting familiar with the capacities of IKCO and exploring various grounds for further co-operation. Among the visitors was the CEO of Telerobot, a long-time partner company of robot manufacturer, Kuka – Iran Khodro's body-in-white plant is heavily populated with the latest Kuka robotic technologies.

Dugard steps up Gulf presence

Dugard Middle East Machine Tools has enjoyed an active presence in the GCC (Gulf Co-operation Council) region since the late 1990s, installing a significant number of machines throughout the United Arab Emirates (UAE), Saudi Arabia, Qatar, Kuwait and Bahrain. Operating from its sales and service operation in the UAE, the company originally concentrated on machines for the oil industry, particularly borers, lathes and double column milling machines – such as You Ji and Tos Varnsdorf models (Dugard Middle East Machine Tools is the official service company for Tos Varnsdorf in the GCC) – as well as the company's own Dugard ranges of large capacity lathes and bridge type machining centres.

Today, demand has increased to such an extent that the company is currently supplying its entire range to customers in UAE. As a result, Dugard Middle East Machine Tools' presence was fortified in 2015 with the opening of its own offices in Dubai. Furthermore, the company is now supported by Aliyat, which has become its sales and service partner for all countries in the GCC region.

Taiwanese trade mission

The Taiwan External Trade Development council (TAITRA) recently led a trade delegation of 26 established Taiwanese suppliers to Kuwait. The visitors represented various industries such as industrial machinery, steel products, medical devices, auto parts and 3D printing. For the event, TAITRA arranged a series of trade meetings in Kuwait to give local buyers and SMEs a platform to discuss business with the participating Taiwanese companies and co-operate with them to exchange experiences. The delegation also visited Iran and Qatar.

ISO9001 for Gulftec

Dubai-based Gulftec Engineering has undertaken to incorporate internationally recognised ISO9001 quality management standards into its work processes. The company has been working to successfully complete the stages of implementation, analysis and evaluation, and has subsequently been awarded ISO9001:2008 certification. The certification of compliance with ISO9001 recognises that the policies, practices and procedures of the company ensure consistent quality in the products and services provided to clients, and reinforces Gulftec's continual improvement process through feedback from daily operations.

Knuth launches Arabic catalogue

Knuth Machine Tools of Germany says it has published the first Arabic technical catalogue for machine tools, containing more than 2500 machine tool and accessory products. The company claims it has one of the most extensive machine tool portfolios in the industry, including conventional and CNC-controlled milling machines, lathes, drilling machines, EDMs and saws, as well as a complete line of plasma, waterjet and laser cutting systems, and a large selection of tools and accessories.

"We are pleased to introduce to the Arabic world the first Arabic technical catalogue for machine tools," confirms Abeer Hefnawy, marketing director at Multirolla Co in Cairo, Kunth's agent in Egypt.

Knuth Machine Tools was founded in 1923 as a family-operated business and is led today by third generation owner, Karsten Knuth.

Baykal in pole position

Baykal Machinery of Turkey has supplied a special, fully automatic pole cutting and bending machine to Qatar that is being used to help produce the new football stadiums required for the 2020 Fifa World Cup. The fully automatic line with an area of 26 x 60 m, and a cutting size of 2.5 x 14 m is said to save up to 50% of the total processing time and works with zero margin of error. The line not only prevents working hazards but also eliminates the cost of labour. It comprises four parts, including a plasma cutting table, loading/unloading unit, bending press and plasma pipe cutting unit.

For further information www.baykal.com.tr

RR supports Turkish AMTC

Rolls-Royce says it will be the first industrial lead and founder member of Turkey's Advanced Manufacturing Technology Centre (AMTC), a project led by Turkey's Ministry of Science, Industry & Technology that carries the endorsements of the Ministries of Defence, Transportation and Energy. Based on a collaborative cross-industry research working culture, the AMTC will be a public-private partnership focusing on manufacturing capability development and technology application in aerospace. However, further sectors such as civil nuclear and marine will be included in due course.

AUCTION SPOTLIGHT

● GoIndustry DoveBid is staging an online auction of machines located in Cheshire and Lancashire, UK. Lots include: a Cincinnati Milacron Maximill T2 twin-spindle, five-axis profiler; two Waterbury Farrel Textron PC115 multi-draw transfer presses; two Webster & Bennett 48" boring mills; two National Machinery No 5 cold headers; a MecWash Midi 400 parts washer; an Asquith ODI Mk II 14/54 radial arm drill; and a Fritz Werner 8505 down-stroking press. Inspection is by appointment. Bidding ends on 12 January.
+44 (0)207 098 3792 www.go-dove.com

● Dechow is hosting an online auction of machines used previously by Jung, Boucke GmbH, Halver, Germany. Lots include: a Lasco HO-U hydraulic double-acting hammer; a complete forge production line; a Gräbener stamping press; a Woeste HSP100 hydraulic press; a Deckel DMC 103V CNC machining centre; a BBC EBS20-UPW15 magnetic induction heating system; and Caterpillar USF T500S tread sand blasting equipment. Bids close from 13 January.
+49 (0)40/43 1300 770 www.dechow.de

● MGR Appraisals is holding an online auction of machines owned previously by JAY Engineering, Cradley Heath, UK. Lots include: three Butler Elgamill 510 series bed mills; a union BFT80/2 horizontal borer; a Collet & Engelhard BF115 horizontal borer, a Colchester Mascot 1600 centre lathe; a Do-All H35 bandsaw; and a Fobco multi-spindle pillar drill; a Bison 270 bandsaw. Viewing is on 11-12 January (09:00-16:00). Lots start to close from 11:00 on 14 January.
+44 (0)121 200 2206 www.mgrappraisals.com

● Cottrill & Co is facilitating an online auction of a BHS Hofler H1001 gear grinding machine for spur, helical and cylindrical gears. The specification includes: maximum gear diameter of 1000 mm; maximum gear width of 420 mm; 1.5 to 18 module size; maximum helical angle of ±35°; 650 mm table diameter; coolant system; change gears; tailstock and extended height for spline grinding (rebuilt 2008). The machine is located in Gloucester, UK. Auction ends on 19 January at 15:00.
+44 (0)121 328 2424 www.cottandco.com

● GoIndustry DoveBid is conducting a private treaty sale of machine tools from Volvo Construction Equipment, Chagnwon, South Korea. The sale includes: 16 Doosan HP5500 horizontal machining centres (year of manufacture 2011) – 13 of which belong to a complete MCV machining line; a Yooil YGS-96A surface grinding machine; two OKK VM5 vertical machining centres; and a Koyo KC-400 centreless grinding machine. Sale closes from 13 May 2016.

Trumpf cuts punching times at Ernest Gill

Halifax-based Ernest Gill Manufacturing has followed up its recent acquisition of a Trumpf TruBend 5130X CNC press brake with an automated TruPunch 3000 CNC punch, a machine that has cut cycle times up to six-fold in some instances. Both the TruPunch and TruBend feature Trumpf tooling and TruTops software.

"We acquired the TruPunch 3000 for a couple of reasons; firstly our automated Trumpf 3530 laser cutting machine was up to capacity, and secondly, our existing punching machine [not Trumpf] was past its best," explains the company's manager, Simon Gill. "We had seen the advantages of automated load/unload on our Trumpf laser cutter and wanted the new punching machine to offer the same."

Gill decided to investigate the main punching machines available on the market but opted for the Trumpf largely because of the machine's single station punching head technology. The TruPunch punching head always holds just one tool – this can be a standard tool for punching, cutting, forming or marking, or one of Trumpf's MultiTools, which combine up to 10 different punch inserts in one tool adapter.

"The TruPunch 3000 features Trumpf SheetMaster load/unload automation with integrated toolchanger and duplex cart system, which enables us to leave it running unmanned overnight," says Gill. "On the first night it ran from 20:00 until 06:00 the next morning without stopping, producing a job that took 58 hours using our previous punching machine – a near six-fold reduction in cycle time. Furthermore, one of the small MultiTools recorded 250,000 hits on that night alone, which just shows how hard the machine worked."

Major steps forward for Radan 2016

The latest release of Radan sheet metal software contains a number of major technological steps to improve CADCAM, Radbend, Radm-ax and Radtube functions. Also, there is now a closer link between those individual modules, including a new style of program and file-type icons, giving a more unified feel.

The CADCAM module includes four major updates, starting with interactive auto-tooling. When manufacturers look at more complex parts they make a decision on where to use auto-tooling. In previous releases of Radan, auto-tooling did not give the option for specific tweaking. However, Radan 2016 allows users to specify which areas of the parts and nest to tool automatically, including individual variations of the parameters, such as the settings for a complicated aperture. This means users can be much more creative with their automatic tooling routines, says the company.

Also enhanced is support for the latest 2D/3D file formats. All file converters have been brought up to date with the latest versions,

while new functionality provides the ability to bring in additional information about the part, including material and thickness.

Further improvements include a new side panel. Here, Radan 3D analyses the model straight after importing it, showing a bill of material-style parts list in a panel on the right side of the screen. As well as identifying which parts are sheet metal for manufacturing with Radan, it can make the non-relevant parts of the assembly, such as bolts and screws, invisible. In short, it shows whether users can progress the sheet metal parts to the next stage, by detailing whether the material is available and if the thickness has been calculated properly, thus reducing the risk of errors.

Brand new XP Range of VMCs at Dugard

Dugard 1000XP Vertical Machining Centre

Featuring:

- Fanuc 0iMD, Siemens 828D or Heidenhain TNC640 controls
- X/Y/Z travel - 1050 / 540 / 560mm
- 22.5kW spindle drive
- 20~12,000rpm speed range
- 44/44/36 m/min rapids
- 36 station carousel type ATC
- BT40 spindle (CAT flange opt)
- 3300 x 2280mm footprint
- Pneumatic counter balanced head

More power, more tools and faster travels

Dugard 2000XP Vertical Machining Centre

Featuring:

- Fanuc 0iMD, Siemens 828D or Heidenhain TNC640 controls
- X/Y/Z travel 2060 / 850 / 815mm
- 22.5kW spindle drive
- 20~12,000rpm speed range
- 33/33/25 m/min rapids
- 36 station carousel type ATC
- BT40 spindle (CAT flange opt)
- Pneumatic counter balanced head

Also Available with 760mm,1350mm and 1600mm X Travel

The 12th Edition STEEL FAB 17-20 January 2016 EXPO CENTRE SHARJAH UNITED ARAB EMIRATES

Laser triples speed and reduces idle times

Neath-based Groundhog (UK), a manufacturer of HSE-compliant welfare units in which staff working on construction projects, railways and other sites can wash, change their clothes and eat, has acquired a 3 kW Bystronic BySprint 3015 fibre laser cutting machine equipped with a ByTrans 3015 Extended 12-shelf system for automated handling and storage of sheet metal. It joins an automated turret punch press installed in 2010.

Matthew Stevenson, design manager at Groundhog says: "Not only does the cell operate 24 hours a day, unmanned after our 08:00 to 16:30 day shift, but it also laser-cuts 1.5 mm thick mild steel sheet three times faster and with greater consistency than our old CO2 laser, which was of the same power.

"We are now cutting at 18 m/min rather than 6 m/min, profiling the sides, roof, doors and other parts of our products," he adds.

"Combining high processing speed with low idle times for sheet exchange has dramatically raised the throughput of our welfare unit components."

A feature of Bystronic's control software, BySoft 7, is its ability to tag components automatically during overnight running of the fibre laser so that they remain joined to the skeleton by thin strips of material. During the day shift, when an operator is in attendance to keep an eye on production, tagging is unnecessary as slippage of a component through an aperture to the underside of the sheet can be detected visually.

During unmanned production, however, the addition of small tags ensures that unscheduled stoppages and lost production are avoided. It is an easy job to remove the tags when shaking parts from the machined sheets in the morning.

Plasma electrodes double consumable life

Hypertherm is introducing SilverPlus electrodes for its HySpeed HSD130 plasma cutting systems. Like all versions of Hypertherm's SilverPlus, this electrode is proven in Hypertherm laboratory testing to last more than twice as long as a standard copper-tipped electrode. In addition, the electrode is said to deliver consistent range 4 and 5 cut quality throughout its life.

The electrodes, protected by patent, are created by fusing a solid silver tip on to a copper electrode base and then inserting a hafnium pin into the tip. This serves to slow the electrode's wear rate as silver disperses heat better than copper. Hypertherm says the electrodes are further differentiated by a superior bond between the hafnium and silver for more consistent wear rates, deeper pit depths, and more robustness to ramp-down errors and hard failures.

"Our SilverPlus electrodes have long been recognised for delivering proven performance benefits to owners and operators of our HyPerformance systems,"

says Martin Geheran, a consumables product manager at Hypertherm. "Now HySpeed plasma system owners can enjoy that same benefit while reducing their overall operating cost through the purchase of fewer electrodes and even nozzles, as the increased electrode life also translates into double the nozzle life."

Using original consumables for Hypertherm plasma cutting system is the only way to ensure optimal performance, says the company. Patented technology and precision manufacturing combine to deliver increased cut speed, better edge quality and longer consumable life.

Kerf conveys Ezystak through growing pains

Dungannon-based conveyor manufacturer, Ezystak, which has enjoyed turnover growth of 300% in the past five years, has invested in a Kerf RUR 3000 CNC UltraSharp plasma cutting machine together with an RUR 3500 machine for profiling wider material sheets.

Prior to the Kerf purchases Ezystak was using subcontractors to supply the profiles it required. However, the company was witnessing indifferent performance from its suppliers, ranging from lengthy lead times, sometimes dubious quality and increased costs.

"We wanted to eliminate bottlenecks created by suppliers delivering parts to excessive lead-times as this was putting pressure on other departments in our business," explains managing director Seamus McGrath. "We also wanted to reduce production costs as we were spending upwards of £12,000 per week on subcontract cutting. We eventually selected the Kerf RUR machines based on the build quality, the cut quality achieved with the UltraSharp plasma unit, the reputation of the supplier and the availability of local support in Northern Ireland."

Ezystak has witnessed a multitude of benefits, including a significant cost reduction in producing its parts. Furthermore, from a lead-time perspective, the company specified the RUR machines with a 10m bed, so it could cut 5 x 3 m sheets on one end of the bed while loading or unloading another sheet at the other end. This pendulum loading system increases the output from the machine by up to 70%.

"We are delighted with the two new machines – they are fast, efficient and cost effective to run from a consumable and power consumption perspective," concludes McGrath.

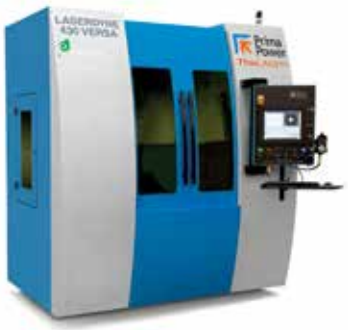
Prima Power releases Laserdyne 430 Versa

Prima Power has introduced its Laserdyne 430 Versa 3D fibre laser system with third generation BeamDirector. Versa is designed for the typical laser processing needs of toolrooms, model shops and R&D centres. The system is said to provide an optimum balance of cost, flexibility and precision for laser cutting, welding, drilling, texturing and marking of a range of materials. Prima Power's 430 Versa also provides a cost effective path into volume production by making possible the full benefits of fibre laser processing with an effectively priced workstation.

The 430 Versa is equipped with an air-cooled 3 kW peak power fibre laser and the proprietary Laserdyne BeamDirector, which provides two axes of laser beam motion without part movement. Prima Power's 430 Versa also offers precision through the use of the same design and technology as Laserdyne systems used in aerospace and medical device production around the world.

Adding to the 430 Versa's flexibility are the features of the Laserdyne S94P control, with a full complement of standard hardware and software features. These include Automatic Focus Control



(AFC) for capacitive part sensing and, as an option, the patented Optical Focus Control (OFC) for sensing of non-conductive surfaces.

The 430 Versa also includes a range of standard focusing lens assemblies, including right angle assemblies for processing inside cylinders having diameters as small as 60 mm, and welding assemblies that shield the weld metal to prevent contamination and protect the focusing lens from spatter.

Both the capacitive and optical methods of focus control precisely guide the motion system, maintaining critical focus position and following the contour of the part, regardless of surface irregularities.

Amada unveils 4 kW LCG3015 AJ fibre laser

The new Amada LCG3015 AJ 4 kW is a high speed, direct drive fibre laser cutting machine designed to speed up sheet metal manufacture. Originally launched in 2014 in 2 kW guise, over 35 units were sold in Europe in just 10 months. However, the new 4 kW model has an increased cutting capacity and can be 90% faster than a 2 kW fibre laser for some applications.

The cutting capacity on the LCG3015 AJ 4kW has increased to 22 mm mild steel, 18 mm stainless steel, 16 mm aluminium, 10 mm brass and 8 mm copper. According to Amada, the machine is especially adept in cutting thin materials at high speeds: its high torque helical rack and pinion direct drives create 170 m/min combined positioning speed. Automation is another focus area as it is equipped with an automatic nozzle changer as standard, although Amada can also offer a single pallet loader or a full multi-pallet tower system.

Amada says it is the only laser manufacturer to design, develop and build its own fibre laser oscillator, the AJ 4000, which features in this machine. The dedicated, small footprint oscillator is said to produce a high quality beam which allows high speed cutting of thin materials, as well as opening up thicker material processing applications.

The AMNC 3i NC control features a 21.5" HD touch screen, which allows for faster and easier operation. It also offers on-screen nesting capabilities, graphical program recall from network and production monitoring analysis.

Another of Amada's successes is the ENSIS AJ fibre laser, which can cut both thin and thick metals in an efficient and eco-friendly way with no need to manually change nozzles or lenses.

MBA introduces Kimla lasers to UK market

Yorkshire-based MBA Engineering is now the UK distributor for Kimla, the Polish manufacturer of CNC fibre laser cutters.

Established in 2009 to offer support to Bystronic laser users, MBA Engineering has succeeded in topping the Association of Industrial Laser Users' breakdown response satisfaction survey for the past three years.

Although new to the UK market, Kimla has over 16 years' experience in the design and production of laser and waterjet cutting machinery. Key features include: the IPG solid state laser source supported by IPG UK; Precitec Pro cutting heads designed specifically for fibre lasers; and the use of linear drives – which coupled with Kimla's control system is said to allow for rapid acceleration and cutting speeds while cutting down on maintenance and servicing requirements. Kimla also offers a tailored CADCAM and nesting package as standard.

MBA Engineering says that its partnership with Kimla will allow

customers to take advantage of the latest fibre laser technology at a competitive price, while benefitting from full support and service by MBA. Machine spares will be available from the company's offices in Wetherby at substantially reduced costs – MBA is also the only fully trained company in the UK with a clean room environment for head repairs and servicing.

New Kimla machines are already running in the UK at both subcontract and OEM users. The fibre lasers are available in configurations ranging from 3015 to 8020 format, while the OPG solid state laser source is offered from 2 kW to 8 kW. The machines come with a two-year warranty for parts and labour as standard.

BROADBENT STANLEY

Selection of Machines Available

The Leading Name In Heavy Duty Machine Tools

*The award winning, heavy duty **Yorky Type 'O'** is the world's leading purpose built Oilfield Grinder, capable of grinding/regrinding all types of 'down hole' oil tools including fishing tools, drills, reamers, hydroclean bars and pipe up to 12,000mm in (472") in length. Available in semi-automatic and full CNC variants*

***Broadbent Stanley** offer a vast range of manual lathes ranging from a swing of 430mm swing x 1500mm between centres up to a massive 2050mm swing x 12,000mm between centres.*

Model HBM-630

CNC Flat Bed and Slant Bed Lathes to suit all applications with bed lengths from 1500 to 12000mm. Spindle bores from 153 to 610mm.

***Broadbent Stanley** offer a number of different models, with both standard and large bore headstocks with swing over bed dimensions ranging from 440mm – 2040mm and from1500mm – 12,000mm between centres*

The ***Broadbent Stanley*** range of dedicated Heavy Duty CNC Vertical Lathes is one of, if not, the heaviest and most rigid Vertical Lathes around

Used Structural Steel Machinery

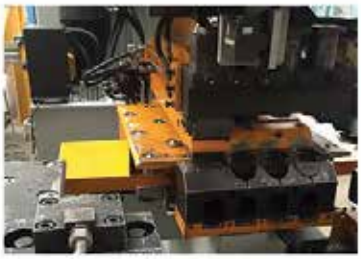
Machinery Available from Stock

Ficep 903 DNB – CNC Drilling & Sawing Line – Year 1999 *(STK-1295)*

- 18m In-Feed
- Carriage & Gripper Bar Feed
- 3 Spindle Drilling
- 900mm Bar Width Processing
- Mitre Cut Band Saw
- x36 Station Marking Unit

Ficep P1104P – CNC Plate Punching System – Year 2007 *(STK-1339)*

- 110 Ton Punching Capacity
- 25mm Max Plate Thickness
- 3 Station Tool Magazine
- 46mm Maximum Punch Diameter
- 800mm Max Plate Width
- X Unlimited Length Plate



Ficep A152 – CNC Angle Processing Line – Year 2003 *(STK-1324)*

- 12m Angle – 150mm
- Upright Leg Punching
- Material Loading Device
- Marking Unit

Ficep Victory 11 – CNC Drilling Line – Year 2007 *(STK-1338)*

- 18m Section Capacity
- 980mm Section Height
- Single Spindle Drilling
- Hydraulic Hold-down units
- Drill Coolant System
- Quick Change Drill Spindle

HACO

KINGSLA

PRESS it — ROLL it — LASER & PLASMA CUT it — SURFACE TREAT it — : HACO does IT

The Drillflex

This affordable machine is capable of processing a variety of profiles with accuracy. High spec, intuitive CNC, adaptable....and all made in the UK

Other important features include:

- Heavy duty, robust and practical design
- High driving and travelling speeds
- Optimal materials and components
- Optimal price/quality ratio - great return on your investment
- User friendly and reliable operation
- Manual or automatic tool changer, ISO 40 or 50
- Max. speed 2750 rpm
- Drilling, hard threading, milling and pocket milling
- Automatic tool length & profile measuring system
- DSTV capabilities (ADAT STEEL)
- Automatic lubrication
- Automatic profile clamping

Weybourne Road, Sheringham, Norfolk, NR26 8HE

Kingsland Steelworkers

Is it time to upgrade your steelworker?

Compacts:

- Small, durable and versatile
- Available from 50-80 ton
- 5 workstations as standard
- Extensive range of equipment available
- Low maintenance
- Superb quality for money

Multis:

- Well engineered and robust
- Available from 60-125 ton
- 5 workstations & 2 user operation
- Extensive range of equipment
- available, easily retrofitted
- Low maintenance
- Superb quality for money
